EZBIS 12.1

You won't believe how much we've packed into the new EZBIS version 12.1

Online Scheduling for Patients *

Now, patients can schedule their own appointments from home or anywhere using a computer, phone or tablet. They simply click a link on your website or log into their MyPatientSite portal account and choose the day and time and the appointment is automatically inserted into your EZBIS appointment schedule.

Scheduling from the MyPatientSite patient portal

Advanced technology only shows the patient the time slots that are actually available. The online scheduling can

Scheduling on a phone

be configured in many ways to suit the needs and preferences for your office. You can determine which providers allow online scheduling and how far in advance the appointments can be scheduled. Both established patients and new patients can schedule their own appointments. After new patients schedule appointments you can even have them fill out their intake information to be automatically imported into EZBIS!

A notification appears in the Front Desk screens to alert staff that new online appointments have been scheduled. This new online scheduling capability is a tremendous time-saver for your office staff!

Online scheduling and the MyPatientSite patient portal are bonus features that are available to EZBIS users either with annual service agreements or those who are hosted on the EZBIS Cloud.

New Weekly View of Appointments

A new "Week" view has been added to the EZBIS Front Desk module. Now, you can see a whole week at a glance. Simply select the provider (or resource) from the drop-down list to see the weekly schedule.

From this screen, you can do scheduling or perform any of the functions that are available in the "Book" view.

Improvements to Electronic Health Records

New "Add Blank" and "Copy Previous" buttons in EHR

Several of the sections in the EHR module now have "Add Blank" and "Copy Previous" buttons. This gives you the option to add a new blank Onset, History, ROS, Diagnosis and Care Plan, or copy the information from the previous one.

Acupuncture - The Acupuncture feature now includes more meridians, including auricular meridians.

Body Chart Ribs View - Specific ribs can now be selected when treating a patient using the Body Chart.

Procedure Codes in Notes - Indicate the procedure codes performed when printing notes for a patient.

Subjective Complaints Custom Sentences - Now, you can add multiple sentences for non-intelliphrase grammar to Subjective complaints.

> **Treatment:**
> The treatment included manipulation of T3, T6, L4, and LSI. Manipulation was administered to C2, and C5 using the Activator technique. Hot packs were performed to the lumbar region. The treatment he received consisted of mechanical traction to the complete spinal region.
>
> Procedure Codes
> 99999: CMT; 1-2 Regions
> 99999: Hot Pack; One Area
> 99999: Traction, Mechanical
> 99999: Electrical Stimulation

Family Payments

In the new version 12.1, when a family comes in for treatment on the same day, it is possible to enter a single payment for the entire family and allocate the appropriate amounts to each family member. This is particularly handy when using one of the integrated credit/debit card services that EZBIS offers. Rather than entering a separate payment and credit card transaction for each family member, a single credit or debit card charge is performed. However, the use of the family payment is not limited to credit and debit card transactions. It can be used for any payment type, including cash or checks.

First, you create "families" by linking accounts together in the "Contacts" tab in the Filing module. Then when you check out any of those family members, you are prompted to enter a family payment and allocate payment amounts to each family member that was treated that day.

Family Members

Add Family Members that you wish to include in combined Family Payments.

Account	Family Member	Type	Balance
2003	Henry R. Sullivan	4 CA	40.00
2004	Allison M. Sullivan	4 CA	38.00
2002	Janice Sullivan	4 CA	0.00
2005	Michael J. 'Mike' Sullivan	4 CA	0.00
2006	Samantha T. Sullivan	4 CA	0.00

Credit Card Surcharges

It is becoming increasingly common for patients to be charged a surcharge for credit card purchases. Version 12.1 now allows for surcharges with our Payment Innovators integrated credit card service.

Large Co-pay Improvement

Changes in insurance plans have created situations in which the co-pay for a service can exceed the amount of the initial service charged for a visit. Now the co-pay will carry over to the subsequent charges for the day.

Provider Codes

In version 12.0, EZBIS added a place to record the primary care physician information. 12.1 now adds the additional to save the information for each physician for future use so that you can choose the doctor from a list.

Insurance Reprocessing Improvements

Reprocessing insurance claims can be challenging for certain circumstances, such as when you want to re-bill a single service from a prior claim, or split a claim into two separate claims. EZBIS 12.1 gives you ways to easily handle these situations plus lots more. Re-processing insurance claims is now faster and easier!
